Subject: Wetlands Permit for Silt Fencing at Humboldt Pit

Smo,

Joe Maki visited Humboldt today and will be sending a summary of his observations. Per my suggestion, Kennecott will pump water with a bentonite film in it back to the pit (a small area near the base of a small waste rock pile in the SE corner of the marsh). Joe believes that the bentonite slurry used to hold the trench open while they grout could leak into the marsh again. Kennecott has proposed to put a temporary silt fence along the foot of the marsh to contain and remove it. Kristen Marizuzza will be contacting you about permitting.

Steve
